2 - Please identify what you consider to be the strengths of the course.

Response Rate	9/13 (69.23%)

- Flexibility
- The instructor was very knowledgeable and patient. Class collaboration through live and online discussions. Hands on approach to learning. The instructor made the class inviting and fun. Great communication with the instructor.
- The great strength of this course is demystifying AI.
- Having in depth class learning and a Professor that is very open to questions and encourages student to ask them to help lean. Always being in office hours when students need help and finding or starting new clubs for students to join so that they use the information that they are learning
- The instructor is very intelligent and knowledgeable in this field.
- This was an intro course that was supposed to give us, those with little or no extended computer knowledge, some insight into what AI was, is going to do for us, and how we should look at it as a tool and not the job killer that the main stream and legacy media preach panic over it. The range of information presented was interesting and at times overkill. An example is the 120-150 page slide decks that drift off into student group activities in the middle of the reading which disrupts the flow of thought.
- The instructor was very prompt in getting out the recorded lectures as well as providing the PowerPoints. He also did a great job pivoting when needed in class and making sure everyone understood what was going on.
- The instructor is a major strength. He is so passionate about the material and is a joy to learn from. The class structure was very engaging, flexible, and inclusive.
- Instructor is super sharp and relays subject information to us in an understandable way.

3 - How did the assignments, class discussions, learning activities, and other parts of the coursehelp you learn the course content?

Response Rate	9/13 (69.23%)

- My presentation allowed me to learn the most.
- Class discussions allowed us to share ideas and content with our peers. We were able to work in the lab and problem solve using machine learning. Very fun! We were asked to choose chapters that interested us to study and present on in class. This was a great learning tool as it brought in diverse content and conversations to the class.
- Class activities designed to help demystifying AI were best.
- having the assignments really helped bring home what we were learning along with the activities and videos in class being able to use different programs that the school offers on an intro level so that we are better in the more advanced classes
- Reading the material and doing the assignments helped me learn the most.
- This was a HyFlex class so the exchange of information was interesting because of the industry backgrounds that people brought to the class. This included other people's current use of AI technology and their conceptions/misconceptions of its capabilities.
- They helped a lot as they were tired directly to the readings for each week and the overall focus of the class.
- The class discussions helped engage the class and helped with learning. The labs gave fun hands on learning and the quizzes helped show me I knew the information we learned.
- Information in the class was handled in a way that I could understand, but I used what I learned from the first day at work and continued to use what I learned as we went through the semester.

Course: AIML101026025/FA: AIML 1010 260 Introduction to Artificial In 25/FA-Introduction to Artificial In: AIML 1010 260

Instructor: Trevor Swarm *

Response Rate: 9/13 (69.23 %)

4 - Please identify areas where you think the course could be improved.

Response Rate	9/13 (69.23%)

- none
- Mr. Swarm did a great job with the class. I appreciated that he would get feedback from the class to get new ideas for growth and improvement for future students. He's very much about doing what is best for students.
- It was a new course which, so it was uneven at first.
- I think that there should be more projects to help retain the information or build a small program. more assignment projects and reports
- The biggest problem is a systemic one. The class has entitled, privileged students who were very disruptive at times. I had to ignore a classmate calling native Americans “Indians,” and using terms like “sexy” in a school setting. This problem is a LCCC problem, there are creepy old guys that hang out in the gym to watch young girls. It’s gross. The online classes were disrupted a lot as well with a grown woman interrupting the stream for up to 20 minutes at a time, showing her video on her bed, and in a bra. It's kind of clear how these people have made their living through out their lives.
- If you are going to lecture, then lecture, don't go off on ramblings or mumblings about other topics that could benefit from AI. From my many years here, part of the class time is to go over the posted or written material and not assume that because you have a laptop you understand everything that was posted. My biggest complaint is that in the third row you cannot hear what is being said from the podium or from the corners of the class. The volume control on the podium microphone is there for a reason and that reason is not to drop the speaker's volume. If the in-class student's are required to bring in their own laptop and listen in on their own headphones than say so, I understand that we expect everyone to be wired and stare at their own screens but I did not come here to look at a screen, I came here to interact in person with an instructor. If we are going to imply that you are to be wired and stare at a screen then this class is a waste of a classroom and its technology and should only be offered on-line. Material that is being presented on the oversized television screen needs to be readable from the back row, again if we are expected to be staring at our own screens then this class is a waste of a classroom and its technology. As far as the various IT and hardware problems are concerned, we knew the class was going to happen and the classroom should have been test driven by the instructor before then semester started. Over the years here a LCCC I have found, from listening to instructor complaints, what the IT dept thinks is needed and what the instructor thinks is needed is usually two different things.
- It was a good class. Learned about a lot of new tools. Other than just fixing the types of assignments given (because it changed), all seemed good.
- The class is great how it is.
- Tech in classroom was way behind where we were. Monitors weren't installed until the last couple of weeks. It's a technical class, why wasn't it ready for students?

5 - What advice would you give to another student who is considering taking this course?

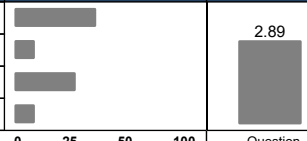

Response Rate	9/13 (69.23%)

- Do the readings.
- This is a great course with a valuable instructor. It's exciting because it's very relatable and cutting edge. I would highly recommend the course with this instructor!
- Don't hesitate, take this course. It's too important.
- DO IT!!! I love AI it keeps me on my toes
- Try to do as much work on your own as possible because if you are teamed with people like that, they will get the same grade while doing less work than you did because they are just attending for free things, and are rooted in the objectification of women as a cultural norm.
- This is the first time that this class was being offered, basically it is s brand new class in at brand new format, therefore you may not get what you expected, such as learn how to program or code. Apparently, you should already know how to code and understand what is going on.
- Attend class and make sure to read the provided materials. If you do this, you should be good.
- Take the class and be involved. It was so fun to learn about a new topic.
- Get in as soon as you can.

2 - Please identify what you consider to be the strengths of the course.

Response Rate	3/6 (50%)

• Slides

• In my opinion the strength of this course was not the content of the slide decks but the realization that there is more to making a model or program than meets the eye. Over the years I have seen people come up with good ideas but had no real concern for the outcomes, how those outcomes would/could affect other peoples lives, or what the legal and un-intended consequences could be. People just thought that you just threw your idea out into the world and no one would ever challenge or question what you were doing, why you were doing it, or what was going to happen to all of the data that you accumulated. Tech people who were creators thought that they were digital gods and goddesses who could not be bothered with anything beyond their dream/concept or that because they could code a concept were smarter than everyone else. In today's world of lawsuits. plagiarism, and privacy issues the creator of a program, model, or intelligence has to think beyond their concept. At times how someone is going to exploit their creation for other than honorable purposes does not come into the mix. So for me, having had a multitude of ethics classes over many years, this was a good refresher course and a way the see what new ideas were being generated.

• This course was amazing had a open line of communication. professor was there when needed and always ready to help

3 - How did the assignments, class discussions, learning activities, and other parts of the coursehelp you learn the course content?

Response Rate	3/6 (50%)

• the class discussions helped the most

• The class discussions and learning activities gave me some insight as to how tech people think and what was important to them in their thought processes. The reading assignments were interesting but overly long. This like many other ethics-type classes should be mandatory and face-to-face because it is too easy to tune the content out because they are boring and make you think passed what is on the paper.

• learned great information along with the lessons

4 - Please identify areas where you think the course could be improved.

Response Rate	3/6 (50%)

• Maybe a bit more organized

• The slide decks are too long (100 to 150 slides) and need to be rearranged so that the actual material and flow of thought is not interrupted with group activities (these should be sent to the back of the deck for in-class use). This is supposed to be a Hy-Flex class and I came to class to interact with the instructor and other students, not to sit and stare at the lesson on my laptop. The sound was poor as the discussions would drift off into mumbling or side conversations, the microphones have a volume control and I should not have to plug in to a laptop in order to hear what is going on. If you are going to put information on the board that information needs to be readable from the back row, if we are expected to stare at our laptop screens instead of the monitor/white board then this class is a waste of a classroom and the technology that is in it. As with other classes I expect that the slide deck content will be gone over in class and it not be assumed that because you went through the slide deck you understood everything.

• class needs more projects to go along with the lessons that will help with making the information stick with the student. more assignments

5 - What advice would you give to another student who is considering taking this course?

Response Rate	3/6 (50%)

• Do the homework

• This class will make you think passed how do I code or program something. If you take time to digest the material and keep it in mind when you are setting up or working on a project it may keep you or your company out of jail because you violated some privacy or data security law, or you stole/repurposed someone else's work without giving them credit for that work. To many tech people this sounds boring or not their problem until they get sued/served/or arrested and have their work confiscated or tied up in long drawn out court cases.

• make sure you read the slides

5/21 (23.81%)	3.80	0.45	4.00

2 - Please identify what you consider to be the strengths of the course.

Response Rate	5/21 (23.81%)

- I think that one of the strengths of this course was that the instructors required us to reach out and conduct a weekly check-in to ensure that we understood the content that week.
- na
- As a working mom and coming back to college, I feel this course has helped me come back as an online student. My strength for the course is putting time on time to complete task on time.
- the teacher is very nice and responds very fast which i appreciated
- It was a great course to learn new things in Microsoft products.

3 - How did the assignments, class discussions, learning activities, and other parts of the coursehelp you learn the course content?

Response Rate	5/21 (23.81%)

- I think the videos and labs were the most helpful as they provided me with visual learning aids.
- na
- The course is base on CompTIA program so it was very nice to follow an structure course where labs and lessons were combined together. It gave me a real hands on experienced.
- they are active and activites so it makes you learn to concepts better and how to actually do it
- Yes, but struggled with the labs. If it wasn't done in the correct order it wouldn't pass you.

4 - Please identify areas where you think the course could be improved.

Response Rate	5/21 (23.81%)

- For myself, I think the course would be more effective if taken in person rather than online. Other than that, I think the course was overall great!
- na
- I don't think the course needs improvement, it is a long course so students need to understand how important is to have a lot of time to put in it.
- maybe a discussion or 2 so we can all talk about the assignments and ways to improve on them
- The group project at the end was hard to collaborate with others. One didn't respond at all, and the one that did, we had different schedules. I ended up doing the project on my own.

5 - What advice would you give to another student who is considering taking this course?

Response Rate	5/21 (23.81%)

- It may seem like common knowledge at first, but buckle up because the end of the course is intense!!
- na
- I recommend this course because it helps you understand the basics of computer applications. Especially, if you are trying to work at a place that requires to navigate in different applications .
- its a very hands on course and you truly do learn alot from it
- Keep up with the labs. Do some each day.

4/21 (19.05%)	4.00	0.00	4.00

2 - Please identify what you consider to be the strengths of the course.

Response Rate	4/21 (19.05%)

- a
- Completed.
- the teacher was always willing to help
- The test out app was very fun to use and a great website to learn on.

3 - How did the assignments, class discussions, learning activities, and other parts of the coursehelp you learn the course content?

Response Rate	4/21 (19.05%)

- na
- Completed.
- they helped alot
- The labs in test out were interactive and easy to use, I didn't like the build your own projects.

4 - Please identify areas where you think the course could be improved.

Response Rate	4/21 (19.05%)

- na
- Completed.
- more discussions
- This class literally made me need therapy. There is so much work that takes so much time I couldn't focus on the classes that actually mattered for my degree. I think if the course load could be lessened it would help.

5 - What advice would you give to another student who is considering taking this course?

Response Rate	4/21 (19.05%)

- na
- Completed.
- take it its very good information
- Sorry that this is a mandatory course and you have to take it. Be prepared to spend hours and hours just trying to get your work done. If you miss a week? You have 15 things to try to do now so good luck.

Response Rate: 7/23 (30.43 %)

1 - The responses to the questions below will be used by your instructor to understandopportunities to improve this course for students who take it in the future.

The course materials (textbooks, access codes, online resources, reading packets, etc.) were useful in supporting my learning.

Response Option	Weight	Frequency	Percent	Percent Responses	Means
Very much	(4)	6	85.71%		3.86
Quite a Bit	(3)	1	14.29%		
Some	(2)	0	0.00%		
Very Little	(1)	0	0.00%		

Response Rate	Mean	STD	Median
7/23 (30.43%)	3.86	0.38	4.00

2 - Please identify what you consider to be the strengths of the course.

Response Rate	7/23 (30.43%)

- The material that was given was very thorough and the assignments were very helpful in learning how to do the work. The instructors were quick to respond to any issues I was having.
- The labs were fun to do.
- Learning about computers
- The course was well-organized, the material was clearly presented, and the instructor was knowledgeable and approachable. The content was relevant and provided a solid foundation in the subject.
- Instructors availability and support.
- The teacher were extremely helpful, great communication.
- There was substantial hands on practice which was helpful.

3 - How did the assignments, class discussions, learning activities, and other parts of the coursehelp you learn the course content?

Response Rate	7/23 (30.43%)

- The assignments were a great tool to put what you've learned, to the test and to help you physically complete the tasks that were taught. The videos and reading material were always easy to understand helped me learn.
- The assignments and activities helped me prepare for the exams.
- By doing them
- The assignments reinforced key concepts and encouraged critical thinking. Class discussions were engaging and helped clarify difficult topics. The variety of learning activities kept the course interesting and supported different learning styles.
- The videos and labs helped learn throughout the course.
- Having the Ade of tutoring from my teacher.
- Lots of practice over theory.

4 - Please identify areas where you think the course could be improved.

Response Rate	7/23 (30.43%)

- I think this class was pretty solid and doesn't need any improvements.
- The labs could be better some of them were buggy.
- Less work
- The course was strong overall. Minor improvements could include providing a bit more feedback on assignments or incorporating additional real-world examples, but these are small suggestions—the course already works very well.
- Maybe students would benefit from having a book on hand.
- The technique of the program was very slow land had a lot of problems contacting with it.
- Doing a group project for an all online class is not helpful. Despite my group's best efforts, there is no real collaboration in this format.

Response Rate: 7/23 (30.43 %)

5 - What advice would you give to another student who is considering taking this course?

Response Rate	7/23 (30.43%)

- The material may look overwhelming at first but as long as you dedicate a couple hours a week to this class, it is not too difficult to get through and some may actually find it kind of fun to work through the tasks given.
- Honestly I have no idea
- Keep up on your work
- Definitely take this course! Stay on top of the readings and participate in discussions—it makes a big difference. The instructor is supportive, and you'll learn a lot if you put in consistent effort. Great class overall!
- Please spread your reading throughout the week. Don't wait until the end to read like I did.
- This is a great course, I would advise any student to take this course.
- Do the homework

2 - Please identify what you consider to be the strengths of the course.

Response Rate	14/18 (77.78%)

- This is a very accessible course for students with busy lives who are looking to take advantage of more online options. The instructor was readily available whenever anyone needed any help with anything. It was a good introduction into coding and computer science without getting too involved. The ZyBooks was also a great of interactive learning.
- Everything
- Flexibility
- It as a standard course.
- Zybooks was an awesome learning resource. I have previously used other online coding platforms like Code Academy and Zybooks was by far more useful.
- The flexibility and kindness of the teacher.
- The strengths of this course would have to be how available the professor was and how eager he was to help me.
- There are many strengths to this course. The biggest one is how helpful my instructor was. I had a few team meeting with him and he was helpful in every single way. I was encouraged to reach out with any questions I had, even if they were dumb questions. I had a hard time adjusting to the new material of the class, and I met with my instructor and he answered all my questions and walked me through anything I needed help with. The things we learn throughout this course is also very valuable for anyone, which is a strong strength in this class as well.
- The strengths of the course were the availability and helpfulness of the professor.
- The communication was extremely well, continued to communicate throughout the entirety of the class and even helped me with extracurriculars as well. Along with, I had two surgeries throughout this semester, and this professor was phenomenal. He made sure to check in with me was extremely flexible and continued to work with me until I figured out whatever it was I was stumped on!
- The strength of this course is the very positive and encouraging instructor. Also, the very fun assignments that help you learn the basics of every lesson.
- My professor was amazing! He always had convenient office hours and would always be there to help and explain when I needed
- The instructor
- The professor is very helpful and encourages students to reach out. The materials are useful and relevant.

3 - How did the assignments, class discussions, learning activities, and other parts of the coursehelp you learn the course content?

Response Rate	14/18 (77.78%)

- The ZyBooks and the assignments both helped me to lear the material. If I had more time to actually implement the coding assignments, I would have been able to learn how to code the programs better myself without as much outside help.
- Very engaging
- the zybook demonstrated the concepts well
- A class like this should be available on campus. Period.
- The material was presenting in a logical fashion and built off of previous weeks learning.
- They solidified and helped me apply what I learned in the course.
- The course work included videos for us to watch, also other added videos for more support
- The learning activities we had were very helpful, specifically the guided learning. It took a long time to do, but it was very helpful in the end. It helps you learn new code and practice it. The guided learning covered why we use specific codes which was very helpful. Then the homework assignments allowed us to put our knowledge into the code, and be able to write a program without being fully guided through it.
- The zybooks were especially helpful, giving direct feedback.
- The online course book really helped me understand the basic coding structures and helped immensely with my final of building a code.
- It helped me learn with practice and discussion.
- The way the assignments were set up was perfect for helping me learn the content because we would have check ins and the professor would ask me questions on my code.
- Helped me with the exams
- The assignments helped reinforce the learning from the textbooks. I did not use any of the class discussion forums that were available.

Laramie County Community College
25/FA Student Course Questionnaire

LARAMIE COUNTY COMMUNITY COLLEGE
Cheyenne | Laramie | Online

Course: COSC101050025/FA: COSC 1010 500 Intro to Computer Science 25/FA-Intro to Computer Science: COSC 1010 500

Instructor: Trevor Swarm *

Response Rate: 14/18 (77.78 %)

4 - Please identify areas where you think the course could be improved.

Response Rate	14/18 (77.78%)

- I think a classroom environment would have definitely helped with learning the content of the course. However, this would have sacrificed the convenience of an online course such as this. Go through all the ZyBooks readings in the first half of the semester oftentimes felt like an information overload and took quite a long time if I wanted to do it well.
- I'm not sure
- assignments took a while to be graded
- A class like this should be available on campus. Period.
- This has been one of my most favorite classes. The coursework flowed well and I wasnt overwhelmed with the content. The final project is shaping up to be pretty cool as well.
- It should also be offered in person.
- I think the course could be improved by making it easier to turn work in, the GitHub, Replit apps were difficult to navigate and use
- I cannot think of anything that needs to be improved.
- This course is good as it is.
- None, course is perfect.
- I cannot think of any areas of improvement for this course.
- I think the course was perfect
- NA
- I don't really have many critiques of the course. If I had one, it would be that some of the info is outdated; for example, some instructions for assignments mention Replit, even though it was not used this year. Overall though, amazing course.

5 - What advice would you give to another student who is considering taking this course?

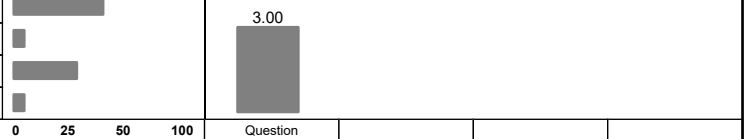

Response Rate	14/18 (77.78%)

- I would say to make sure that they stay on top of the assignments as they come up or even before they come up. Also make sure to pay attention to the material as much as you can in the early part of the semester. This will make the homework and comprehension that much smoother later on.
- Its a great first step towards computer science.
- do the zybook
- A class like this should be available on campus. Period.
- Try new approaches to thing. Utilize your resources. This class allows for some use of AI and it was very helpful in helping me to understand concepts and find errors in my code that I wasnt seeing myself.
- Take the high point assignments seriously.
- I would encourage it with this professor, just make sure you keep up on the work and ask quesitons
- The advise I would give another student who is taking this course is to not be scared to reach out to the professor over any questions. This class can be confusing at times, and it is easy to confuse yourself more if you do not reach out to get some help. The instructor was very helpful and kind regarding any issues that I had, and he also understands the difficulties that come with the class. He is very helpful when you have any questions.
- Speak to the professor if you need help, they are nice.
- To actually apply yourself, once you learn the process it is truly self-rewarding when you debug your code.
- I would tell them to keep up with the work, and leave lots of time for the homework and especially the final.
- Keep up with your coding
- Study
- I would tell them to make sure they are staying caught up with the weeks, it is easy to fall behind in the class because it is asynchronous.

14 - What aspects of this course contributed most to your learning?

Response Rate	14/18 (77.78%)

- The course reading and assignments contributed the most to my learning.
- Guided assignments.
- The best learning experience I got was when I was doing the assignments
- I like the professor, will take many classes from him, and look forward to working together. But for this class, AND THIS IS NOT HIS FAULT, having it online-only is an absolute rip off. For an online only class, the professor did a fine job: but again, this class should NOT be online only, it should be hyflex.
- This course was set up in a logical manner that flowed easily from one concept to the next. Zybooks website was awesome.
- The guided learning notes.
- Once I figured out what exactly I was doing, I would say practicing with the assignments each week helped me the most.
- A lot of things contributed to my learning. Again a very helpful instructor who recommended reaching out with any questions. The technology was easy to use once I learned how to use it. The guided learning help me understand the material. The homework helped me put my understanding of the material to use, and to see if I fully understood what was in the guided learning. Then, the lecture videos to watch were also very helpful to understand a visual of what is expected.
- The helpful instruction.
- I stated this in the first section of writing.
- The assignments and interactive learning homework.
- My professor
- A lot of the exercises
- The Zybooks were boring but honestly had a ton of useful material, I learned a lot from them.

Response Rate: 9/11 (81.82 %)

1 - The responses to the questions below will be used by your instructor to understandopportunities to improve this course for students who take it in the future.

The course materials (textbooks, access codes, online resources, reading packets, etc.) were useful in supporting my learning.

Response Option	Weight	Frequency	Percent	Percent Responses	Means
Very much	(4)	6	66.67%		3.33
Quite a Bit	(3)	1	11.11%		
Some	(2)	1	11.11%		
Very Little	(1)	1	11.11%		

Response Rate	Mean	STD	Median
9/11 (81.82%)	3.33	1.12	4.00

2 - Please identify what you consider to be the strengths of the course.

Response Rate	9/11 (81.82%)

- The self-teaching(with the ZyBooks) works really well for me.
- Great instructor. Very responsive and encouraging.
- It gave me a lot of room to learn and relax since it was an online course.
- The final topic. At first I thought it might be a slog because it seemed so random but after researching the possible applications of the final project, I realized that it forced my brain to form some wild new pathways in order to cope. I enjoyed the experience in the end.
- The course is built in a way where we build and iterate on a program over the semester as a final assignment, with check-in assignments acting as exams. This structure promotes putting what we learned to a tangible project. With the check-in assignments, we see our growth over the semester and reflect critically on our program in a constructive way. I love how I can see my project evolve and become better over the semester. It is a rewarding feeling.
- n/a
- N/a
- The Instructors willingness to help students learn.
- I really appreciate the patience from the teacher, and I think that the course is really well thought out.

3 - How did the assignments, class discussions, learning activities, and other parts of the coursehelp you learn the course content?

Response Rate	9/11 (81.82%)

- The assignments went well with the sections of the book.
- Great work flow and lots of room to explore this language.
- It provided a lot of information that was very easy to understand when it comes to code and programming.
- The interactive book was insanely helpful and I really appreciate that its grading was at our pace. I spent an abundance of time on certain sections taking notes so they naturally took much longer.
- Programming is a skill you can only learn by doing. This course is built around that in all aspects. The guided learning ease you into new concepts and tools that we then use for homework programs that are focused on expanding on those tools. Then the final check-ins blend those skills together into actual progress. It is a very streamlined and interesting way to learn.
- n/a
- N/a
- They force you to use methods that may be unfamiliar.
- The zybooks helped get a good basis, and the videos helped clarify the info.

4 - Please identify areas where you think the course could be improved.

Response Rate	9/11 (81.82%)

- Not using GitHub, the codespaces do expire. I would always prefer to use VS Code. I would also like to improve on instructor communication.
- Nothing
- There are no areas of improvement, this class is good.
- I wish I could be more informative here but all I can really say is it seems like something is missing. This may be entirely due to the fact that I don't mesh with asynchronous online learning. The disconnection makes it extremely difficult for me to stay focused and consistently accumulate information and hold on to it. I find myself having to reference back to the book for the same things over and over. I don't have a solution to this but it did present a challenge.
- I can't think of much. Perhaps more collaboration between students, but I am not sure that would be of any benefit.
- n/a
- N/a
- I don't personally learn effectively via the guided learning.
- I'm not sure, I thought it went well.

Course: COSC103050025/FA: COSC 1030 500 Computer Science I 25/FA-Computer Science I: COSC 1030 500

Instructor: Trevor Swarm *

Response Rate: 9/11 (81.82 %)

5 - What advice would you give to another student who is considering taking this course?

Response Rate	9/11 (81.82%)

- ALWAYS keep backups of your codes (and codespaces if continuing to use GitHub). Continue to practice your other coding languages as well as the one you are learning and continue to practice your language (currently learning) more than just recommended with the assignments.
- Keep learning and use these skills to create for yourself.
- Make sure you work ahead of the guided learning assignments so that way you know what you're doing for the homework/projects and you should be golden.
- Do not get hung up on one line of code for too long. Mark it for debug and build past it or you'll lose hours of your life.
- Don't be intimidated by the complicated syntax of C++. It gets easier. Also take time each week to work on the final program check-ins instead of waiting for the week it is due. It makes the final much less stressful doing so.
- n/a
- Just follow the course
- Try to use methods that are unintuitive.
- Make sure to do the work throughout the year, because it's really hard to learn everything at once to catch up

6 - During this academic term, how much has this course emphasized the following mental activities?*

Memorizing facts, ideas, or methods from your class and readings so that you can repeat them in pretty much the same form*

14 - What aspects of this course contributed most to your learning?	
Response Rate	9/11 (81.82%)

- I really like the ZyBooks, they are interactive and you are able to see directly how things work when you are in the beginning of learning a programming language and continuing throughout the course.
- Everything.
- It contributed to me learning about code and programming in new ways.
- The book was wonderful and the teachers intermittent conferences helped keep me tasked on the final for the entirety of the semester. The final project expectations pushed me to learn beyond what was expected.
- I think having a hands-on, long-term project that we refine and iterate is really the core of the class and it engages learning very effectively. It also rewards effort by producing something tangible at the end of class.
- n/a
- N/a
- The professors ability and willingness to explain topics thoroughly.
- The videos that the teacher provided

Course: COSC1030L50025/FA: COSC 1030L 500 Computer Science I 25/FA-Computer Science I: COSC 1030L 500

Instructor: Trevor Swarm *

Response Rate: 5/11 (45.45 %)

1 - The responses to the questions below will be used by your instructor to understandopportunities to improve this course for students who take it in the future.

The course materials (textbooks, access codes, online resources, reading packets, etc.) were useful in supporting my learning.

Response Option	Weight	Frequency	Percent	Percent Responses	Means
Very much	(4)	3	60.00%		3.60
Quite a Bit	(3)	2	40.00%		
Some	(2)	0	0.00%		
Very Little	(1)	0	0.00%		

Response Rate	Mean	STD	Median
5/11 (45.45%)	3.60	0.55	4.00

2 - Please identify what you consider to be the strengths of the course.

Response Rate	5/11 (45.45%)

- The learning process was nice and straightforward with no problems in my eyes.
- The final topic. At first I thought it might be a slog because it seemed so random but after researching the possible applications of the final project, I realized that it forced my brain to form some wild new pathways in order to cope.
- n/a
- N/a
- Like the main class, the strength of this class is in hands-on learning and building a program over the semester in the final check-ins

3 - How did the assignments, class discussions, learning activities, and other parts of the coursehelp you learn the course content?

Response Rate	5/11 (45.45%)

- It helped me learn in a more nice manner while trying to juggle the other information from other courses in the semester.
- The interactive book was insanely helpful and I really appreciate that its grading was at our pace. I spent an abundance of time on certain sections taking notes so they naturally took much longer.
- n/a
- N/a
- The zybooks guided reading introduced new concepts and had us practice them. Then we applied those new skills on homework assignments and in other ways on the final check-in assignments, improving what would be our final program.

4 - Please identify areas where you think the course could be improved.

Response Rate	5/11 (45.45%)

- No need for improvements, since this class is good enough.
- I wish I could be more informative here but all I can really say is it seems like something is missing. This may be entirely due to the fact that I don't mesh with asynchronous online learning. The disconnection makes it extremely difficult for me to stay focused and consistently accumulate information and hold on to it. I find myself having to reference back to the book for the same things over and over. I don't have a solution to this but it did present a challenge.
- n/a
- N/a
- I really do not have much to complain about. The course structure is very interactive and fair.

5 - What advice would you give to another student who is considering taking this course?

Response Rate	5/11 (45.45%)

- Make sure you work ahead on the guided learning assignments first since it will give you plenty of time to work on the homework/projects.
- Do not get hung up on one line of code for too long. Mark it for debug and build past it or you'll lose hours of your life.
- n/a
- N/a
- Don't wait until the week the final check-in is due to start it. Work on it a bit through each day. Don't be afraid to be wrong either. As you learn through the semester you will find better ways of improving your program.
